from Chlamydiag permoniae. The genomic sequence was amplified up PCR primers. The 5' primer contains a NotI restriction site, a binding site, an initiation codon and a sequence close to the 5 the 98kDa putative outer membrane protein coding sequence. The contains the sequence encoding the C-terminal sequence of the pouter membrane protein and a Bardi restriction site. The stop couter membrane protein and a Bardi restriction site. The stop couter membrane protein and a Histidine tag. The PCR product was cinto a eukaryotic expression vector (pCA-Myc-His) by restriction the vector and the PCR product with NotI and BamHI and performilization reaction. This expression vector was injected intramus and intranasally into mice, which were subsequently incoulated and intranasally into mice, which were subsequently inoculated Chlamydia pneumoniae. The chlamydial lung titers of the immunis were lower than those of the controls. Thus the 98kpa putative membrane protein can be used as a vaccine to provide protection chlamydia infections, especially Chlamydia pneumoniae infection. The polypeptide may also be administered orally to treat Chlamy infection. The present sequence may also be used in the construction of attenuated Chlamydia strains that can over-exprese or express it in a non-toxic form. Novel Chlamydia 98 kDa putative outer membrane protein antigen, for vaccination and protection against Chlamydia infection present sequence is the 98kDa putative outer Dunn PL; Claim 1; Fig 1; 93pp; English Oomen RP, WPI; 2000-365569/31 P-PSDB; AAY94327. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharymgitis. The polypeptides mocoded by the open reading frames of the C. pneumoniae genome (see AAY34884-Y15879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae mucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1230025 BP; 367213 A; 249833 C; 249013 G; 363589 T; 377 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This DNA sequence codes for the novel 90.0 kDa surface exposed protein Omp8 (see AAM88421) of the human respiratory pathogen (thamwida preumoniae. By generating antibodies against C. Chlamydia preumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAM88417-27) encoding Omp4-Omp15 proteins (see PAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: C omp12.11.05.4, 413 and 14 in one cluster and Omp6.7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               281 ACTCTAGAAATATTCCTGGAACAGGCACAGCAATCACAAAAAGCTGTTTTAACAACACT

Dequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia preumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as therosclerosis, coronary artery disease, carotid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched Chlamydia preumoniae, and the nucleic acids may be used in PCR, branched CR paumoniae gene expression. The present sequence represents a pneumoniae across of the nucleic acids may be used in pCR, branched preumoniae gene expression. The present sequence represents a pneumoniae by the nucleic acids may be used in pCR, branched preumoniae gene expression. The present sequence represents a preumoniae protein of specifically claimed DNA which encodes a Chlamydia pneumoniae protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1066
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1126

                                                                                                                                                                                  The invention relates to a vaccine (I) comprising at least one polynucleotide (ABG78008-ABG78019) having a chlamydia sequence or at least one chlamydia antigen (ABB98013-ABB98134) and a pharmaceutically acceptable carrier. The antigens are useful for immunising an animal, by providing at least one Chlamydia antigen or its antigenic fragment to the animal, in an amount effective to induce an immune response in the animal e.g. mammals including bovine or human. The method is effective to induce an immune response against C. psittaci, C. pneumoniae or non-Chlamydia infection. The method further involves administering to the animal an antigen or an antigenic fragment from Chlamydia species other than non-Chlamydia species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   810 TACTATAAGAGATAACAAAGTCTTGATTTTTGAGGAAAATACTTCTTCAGCAAAAGGTGG 869

New vaccine comprising a polynucleotide with a Chlamydia sequence or Chlamydia antigen, for inducing an immune response against Chlamydia psitacci, Chlamydia pneumoniae, other Chlamydia species, or a

6; Page 74-76; 100pp; English.

The invention relates to a vaccine comprising a pharmaceutical carrier and at least one polymucleotide having a chlamydia sequence or at least one Chlamydia antigen. The polymucleotide sequences are obtained from cloned expression library of fragmented genomic DNA (expressed in the vector pCW/UDA(191). Also included are immunishing an antimal a comprising providing to the animal at least one Chlamydia antigen or its antigenic fragment (expressed from the cloned polymcleotides) to induce an immune response (the proteins are chosen by transforming a vertebrate animal with constituents of that library and choosing those which elicit chlamydia antigen the proteins are chosen by transforming a vertebrate animal with constituents of the library and choosing those which elicit culture and purifying the protein), preparing antibodies against a animal with the Chlamydia antipodies against chlamydia antipodies against chlamydia antipodies against chlamydia antipodies against chlamydia bacterial infection when confers immune response in a vertebrate animal with the identified confers immune response in a vertebrate animal with the identified antigen, and obtaining antibodies produced in the animal, the antibodies antigen, and obtaining antibodies produced in the animal, the antibodies confered antigen, confered antigens for a first disease state or antibodies produced in the animal, the antibodies antigen, and obtaining an antigenic polypeptide or a nucleic acid encoding an antigenic polypeptide or a nucleic acid encoding an antigenic polypeptide from a second disease state or infectious agent, on the ferting the homology to see if it is an antigenic polypeptide or a nucleic acid encoding an antigenic polypeptide from a second disease state or infectious agent for the first disease state or infectious agent for the first disease state or infectious agent for the first disease state or infectious agent for the disease confidence or antiderious agent for the disease confidence or antiderious agent for the disease confidence

```
cassette comprising NI under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional termination region functional in an expression host, and a transcriptional termination region, (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell, as a result of induction of the expression cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a PI comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pneumoniae protein (PI), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural sectivity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of NI; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to NI; (3) an expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Davis R;

                                                                                                                                                                                                                                                                                                                                                                                                         This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see AAW88418) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. protein Omp5 (see AAW88418.5) so polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The matchedy was used to identify the genes (see AAX08816.27) encoding Omp4-Omp15 proteins (see AAX0881-27) encoding Omp4-Omp15 proteins (see AAX0881-27) encoding Omp4-Omp15 proteins (see AAX0881-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12.11.00.54,13 and 14 in one cluster and omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying manmels (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the dagnosis of C. pneumoniae infection in mammals. The nucleic acids being particularly useful as DNA mammils, the nucleic acids being particularly useful as DNA waccines for effecting in vivo expression of antigens. The vaccines may also prevent attherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    427 CAGCAGCGTGGTAGATAAATCTACCACGTTTATAGGGTTTTCTTCGCTATCTTTTATTAC

Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carctid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and mucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chlamydial infection; antigen; immunogen; vaccine; diagnosis; human respiratory disease; cardiovascular disease; atherosclerosis; coronary artery disease; cartery stenosis; myocardial infarction; cerebrovascular disease; aortic aneurysm; claudication; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chlamydia pneumoniae cp0010 ORF DNA, SEQ ID NO:96.

AAZ61502-09 encode Chlamydia pneumoniae polypeptides. The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, and inclusion membrane structure, and in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polymorleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia
                                                                                                                                                                                                                                                      Novel antigens and corresponding DNA molecules that can be used to prevent, treat and diagnose disease caused by Chlamydia infection imammals, especially humans -

                                        ABL91192;
RESULT 12
ABL91192
```

pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as also involved in the development of cardiovascular diseases such as thereosclerosis, coronary artery disease, acutic antery stenosis, myocardial infarction, cerebrovascular disease, acutic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in PCR, branched Chlamydia proteins may be used in PCR, branched Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a pneumoniae protein of specifically claimed DNA which encodes a Chlamydia pneumoniae protein of Claim 5; Page 49; 364pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            482 ATTGCGTCTCCTGGAAGTTCGATAACTACCGGCAAAGGAGCCGTTAGCTGCTCTACGGGT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pneumoniae. The test comprises detecting antibodies specific for obpe-dompis or detecting nucleic acid fragments encoding these outer membrane proteins, especially by FOR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The mucleic acids and proteins can also be used in the immunization of waccines, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma,
                                                                                                                                                                       This DNA sequence codes for the novel 96.7 kDa surface exposed protein Omp9 (see AAW86422) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclomal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The artibody was used to identify the genes (see AAX6816.27) encoding Omp4-Omp15 proteins (see AAW8417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11.10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia
                      Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 20; Length 2757;
Species-specific test for identifying mammals infected with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels

```
This sequence encodes a Chlamydia antigen of the invention, designated CPN100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they proteins may then be used a produce the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detection of antibodies infections may also be used as diagnostic reagents for detection of antibodies infections may also be used as diagnostic reagents for detection of the control of antibodies in the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th

Chlawydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinustiis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.

Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia promoriae (strain CW1029), and ABL91184-ABL9137 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia preduction and for diagnostic purposes. Chlamydia preundia is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carcid artery stenosis, anyocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the proteins and also be used in the detection of prevention or treatment of chlamydia | infections, particularly Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched Chlamydia probe assay or blotting techniques for determining Chlamydia pneumoniae expression. The present sequence represents a precipically claimed DNA which encodes a Chlamydia pneumoniae protein of Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes -Claim 5; Page 57-58; 364pp; English WPI; 2002-154726/20 Grandi G; (CHIR-) CHIRON SPA. Patent No. 6559294

GENERAL INPORMATION:
TYPLE DE INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragmer.
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, pre
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999
CURRENT PILLNG DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                     TYPE: DNA ORGANISM: Chlamydia pneumoniae
                                                                                                                                                         LENGTH: 1230025
